

# In-home Bone Density Exams

**Retina Labs offers a proven solution for closing the HEDIS osteoporosis measure by bringing bone density screening to health plan members in the comfort of their home.**

Using the latest in portable ultrasound technology, we screen women over 65 at risk for osteoporosis or fractures—accurately, quickly and with maximum member convenience. This test meets the standard of care to close NCQA HEDIS OMW or OSW gap.

Ultrasound-based screening offers an effective alternative to the traditional DXA-based scans where use of DXA for diagnosis or monitoring is not possible due to cost or geographic limitations of available systems and in cases where x-ray exposure should be avoided.

## Program Features:

- Member outreach & scheduling
- Highly trained technologists
- Quick, non-invasive, radiation-free test
- Suitable for high BMI members
- Graphical measurement report created within minutes
- Test results communicated to members and their primary care provider

## Benefits:

- Close the HEDIS osteoporosis care gap
- Improve STAR ratings
- Reduce costs
- Save referral fee for more DEXA scans
- Increase member satisfaction & loyalty
